

## Whole House "Big Blue" KDF/Carbon Block System

First filter is a KDF 55 process media that uses high purity copper-zinc granules that use **Redox** (the exchange of electrons) to remove chlorine, hydrogen sulphide, water soluble heavy metals, and microorganisms from water. Second filter is a 1 micron extruded carbon block not only for chlorine taste and odor but also for lead and cyst reduction (giardia and cryptosporidium). This filter also reduces thm's and trihalomehtanes.

This system is most popular in Reno, Sparks, and Carson City where the water is soft, but tastes bad.
