

Softened water can save homeowners hundreds of dollars.

Detergent savings from softened water

Hot water savings from softened water

The **Water Quality Research Foundation** has published three studies over the past two years which shows that softened water:

- Reduces the amount of detergent required to clean dishes and laundry
- Eliminates the need to use hot water in washing machines
- Reduces the cost to heat a home's hot water

And if that isn't enough of a reason to switch to softened water, the study also found that with softened water your clothes and dishes come out cleaner.
