

Water has its place – just not in your home.

If you own a vacation home, rental property, or primary residence in the Lake Tahoe area, water damage arising from broken pipes and leaking appliances can be your worst nightmare. Monitor your home 24/7, whether you are home or away, with WaterCop®.

- Automatically shuts off the main water valve once its sensors detect the presence of water
- Detects leaks that can often occur with appliances such as hot water heaters, washing machines and automatic ice makers
- Includes a remote access option that notifies you that a leak has been detected
